Team / group name: _____ Primary adult contact: _____

Participating Team | Initial Mentorship Plan

Robotics Program: _____ | Age / Division: _____

Prepared / version date: _____	**Mentorship term: _____ (suggested 3 months)**
Start / end: _____ / _____	**Next agreed session: _____**

Participation begins only after intake review and approval. This plan governs future mentorship sessions and does not change team affiliation.

01 Purpose and schedule

Help participating students build independent robotics and teamwork skills. Agree on session frequency (one-time / monthly / twice monthly / other), duration, dates, and an NSF-approved location. Suggested baseline: two 60–90-minute sessions monthly, with virtual follow-up by agreement. If a competition or other scheduling conflict arises, the adult leads will mutually agree on a replacement date; rescheduling is not automatic.

02 Initial learning goals — adjust to the completed intake

Focus	Student activity	Evidence of progress
Design and testing	Choose a mechanical problem, compare options, and conduct repeatable tests.	A student-created test record and explanation of the design choice.
Programming and debugging	Explain existing student code, isolate a problem, and test student-made revisions.	A debugging record and explanation of what changed and why.
Documentation and readiness	Record engineering decisions, practice explaining the work, and prepare an event checklist.	Notebook samples, a short student interview, and a team-prepared checklist.

03 Session routine and records

Suggested session: 10 minutes on progress; 40–60 minutes of student-led learning/testing; 10–20 minutes of reflection and next steps. Students work on agreed tasks between sessions. NSF logs general attendance, topics, student-created work, and follow-up.

04 Responsibilities and boundaries

NSF supervises its mentors. The participating team's Primary Coach remains responsible for its students, registration, permissions, and supervision. Both teams provide a responsible adult for sessions; scheduling is through adult contacts. Mentors teach and give feedback; students create and understand their own robot, code, notebook, and strategy. Mentors do not provide finished competition solutions. Equipment, funding, and affiliation changes need separate authorization.

Public media use. NSF may photograph, record, and publicly share identifiable mentorship media only when separate, appropriate written permission exists for each identifiable participant (a parent/guardian for a minor), plus required ownership permission. Uses may include presentations, websites, social media, reports, and approved outreach materials. Permission is optional; declining does not affect participation.

05 Review and confirmation

Review after approximately three sessions and at term end. Focus on independent learning and problem solving—not awards. Record revised goals and agree whether to continue, pause, or conclude. Either side may request a pause or end; continuation needs mutual confirmation.

NSF Program Lead: _____	**Participating Team Primary Coach: _____**
Confirmed / date: _____	**Confirmed / date: _____**
